

Oak Hill Gardens

Polyrrhiza(Polyradicion) lindenii (Ghost Orchid)

Care Instructions

The leafless “Ghost Orchid” is native to the Florida Everglades; it requires a warm and humid environment, with filtered light and stagnant air (no fans!). Our mounted parent plants have flowered annually in a corner of our warm greenhouse. Our ghosts are misted on warm and sunny days, and watered weekly with our normal fertilizer solutions of various brands and formulations. More frequent watering may be needed in the home or in other less humid growing environments. Fertilizing less frequently would be advisable during the winter months.

It is a rare plant, difficult to grow due to its specific climate requirements. Since these requirements are beyond our control once the plants leave our greenhouse, we cannot guarantee their survival in your growing conditions.
